

RAIDZAP

UV RESIN

**BUILD HEADS AND BODIES ON FLIES
LOW SMELL - TACK FREE - CRYSTAL CLEAR**

Thank you for purchasing a RaidZap product. We know that, more and more trash floats around in our world oceans. Too much trash means too much pollution and damages our world and our water environment. At RaidZap, we have made the choice to use #recycle Carton for our boxes, so we can contribute to change.

It is time to change the world we live in. To protect the ocean and environment. So please take our Carton boxes and HPDE bottles after use, and put it in your local recycle system. Thanks for making a difference today. – It all starts here #recycle

HOW TO USE

Place the RAIDZAP UV resin on your fly. The UV flashlight should be at a distance of 1-5 cm - (0.4 - 2 Inch) from the surface of the UV resin to cure it. We recommend to use RAIDZAP 365 PRO. Don't touch the UV resin after it's cured. It's hot. Let the UV resin cool off. The UV resin are working during the cooling time. So let it cool off, before you touch it. Raidzap cures with any real UV light.
